

ABSTRACT

ELECTRONIC WATCH WITH A LARGE DATE APERTURE

The electronic watch includes hands (2, 4, 5) indicating the time, a device (6) displaying at least the date, this device being formed of first (9) and second (10) indicators on which are marked figures (11, 12) respectively indicating the tens and the units of said date. A control member able to be activated manually allows the hands to be set to the correct time and the date to be set. The first (9) and second (10) indicators are each driven by an independent motor (17, 18).
